Financial Solutions

Create a web application to support credit report and monitoring to clients through multiple sites. The challenges were keeping site highly secure, integrating user lists that were enrolling online with those registering offline, multiple language support, constant email notifications to client, and synchronizing web data with the mainframe.

Key Challenges

1. Working with Creditnet to extract both credit reports and Monitoring Alerts from three credit bureaus for both offline and online

2. Keeping information extremely secure (PCI compliance)

3. Synchronizing both offline and online enrollments and ability for users to switch between offline to online or vice versa

4. Synchronizing website activities with clients mainframe system for billing and customer support.

5. Content Management: Support both English and Spanish versions of the website.

Key websites:

www.chasecreditbuilder.com
www.chaseidprotection.com
www.fadvcredit3monitor.com
(For Citibank Users coming through their Citi site)

Functionality: Our experts can provide you with a demo of the developed websites, and explain enhancements that could improve both your business intelligence and secure company's Bottom line.
